PEATURE:
NAME/KEY: UNSURE
LOCATION: (136)
OTHER INFORMATION: "Xaa" can be any naturally occurring amino acid,
OTHER INFORMATION: or is absent.
Description of Artificial Sequence: TALL-1R polypeptide derived from the amino acid sequence alignment shown in Figure 8A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          "Xaa" can be any naturally occurring amino acid, or is absent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     can be any naturally occurring amino acid, absent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             "Xaa" can be any naturally occurring amino acid or is absent.
                                                                 FEATURE:
NAME/KEY: UNSURE
LOCATION: (46)
OTHER INFORMATION: "Xaa" can be any naturally occurring amino acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                            acid,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          "Xaa" can be any naturally occurring amino acid, or is absent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          "Xaa" can be any naturally occurring amino acid, or is absent.
                                                                                                                                                                                                                        amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           "Xaa" can be any naturally occurring amino acid or is absent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       acid

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 170, Sequence 170, Sequence 170, Sequence 324,

Patent No. 6444642

GRUERAL INFORMATION:

APPLICANT: SKIAT, Robert

APPLICANT: GAYNIC, David

ITILE OF INVENTION: METHODS FOR TREATING MUSCLE DISEASES AND

TILLE OF INVENTION: David

ITILE OF INVENTION: DISORDERS

FILE REFERENCE: 04585/028003

CURRENT FILING DATE: 1995-06-06

EARLIER APPLICATION NUMBER: 08/209,204

EARLIER APPLICATION NUMBER: 08/209,204

EARLIER APPLICATION NUMBER: 08/0506

EARLIER APPLICATION NUMBER: 08/059,022

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                              ISOId-Q9DBD0-2; Sequence=VSP_006506;
TISSUE SPECIFICTY: Highly expressed in spleen and testis;
TISSUE APECIFICTY: Highly expressed in spleen and testis;
DISEASE: Defects in THYERE In lung and thymis.
DISEASE: Defects in THYERETIS are a cause of severe B-cell
deficiency. B-cell deficient strain A/WySnJ has a 4.7 kb insertion
in the BAFRR gene leading to an altered C-terminus. The mutant RNA
is not detectable. B-cell lymphopoiesis is normal, but the life
span of peripheral B-cells is much reduced.
SIMILARITY: Contains 1 TNFR-Cys repeat.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MGD; MGI:1919299; Infrsf13c.

Plays a role in the physicochemical properties of the T-cell surface and in lectin binding. Presents carbohydrate ligands to selectins. Has an extended rodlike structure that could proteinte above the glycocalyx of the cell and allow multiple glycan chains to be accessible for binding. Is a counterreceptor the T-cell-ApC (antigen-presenting cell) contact site thus suggesting a negative regilatory role in adaptive immune response.

-: TISSUE SPECIFICITY: cell surface of thymocytes, T lymphocytes, neutrophile, plasma cells and myslomas.

Dev. Biol. 137:287-304 (1990)

-1- FUNCTION: Low affinity receptor which can bind to NGF, BDNF, NT-3, and NT-4. Can mediate cell survival as well as cell death of neural cells (By similarity)

-1- SUBUNIT: Homodimer, disulfide-linked. Interacts with P75NTR-associated cell death executor. Interacts with TRAF2, TRAF4 and TRAFE (By similarity)

-1- SUBCELUIAR LOCATION: Type I membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                  Gallus gallus (Chicken).

ALIGNMENTS

```
The present invention describes a human tumour necrosis factor receptor designated Zuffil2 (1). (1) has cytostatic, immunosuppressive, designated Zuffil2 (1). (1) has cytostatic, immunosuppressive, designated and antidiabetic, and can be used in gene therapy. (1) can be used for inhibiting, in a mammal, the activity of a ligand that binds Zuffil2 (e.g. ZINF4), for treating disorders and diseases associated with B lymphocytes, activated B lymphocytes or resting B lymphocytes, and for inhibiting the proliferation of tumour cells. (1) is useful for treating autoimmune disorders such as systemic lupus erythematosus, myasthenia continumune disorders such as systemic lupus erythematosus, myasthenia gravis, multiple sclerosis, insulin dependent diabetes mellitus, asthma, rhematoid arthritis, bronchitis, emphysema and end stage renal failure, or renal disease such as gydemerulonephritis, vasculitis, chronic lymphoid leukaemia, hephritis, and pyelonephritis, and for treating renal collassis, multiple myelones, lymphomas, light chain neuropathy, or amyloidosis, hypertenaion, large vessel diseases, graft-versus host disease, graft rejection and crohn's disease, (1) is useful for modulating the immune system, for regulating B cell responses and decombanication. The present sequence represents mouse Zuffil and beal communication. The present sequence represent invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Murine, BAFF receptor; BAFF-R; cytostatic; hypotensive; inflammation; Tumour Necrosis Factor; autoimmune disease; immunosuppressive, cancer; mysthenia gravis; hypertension; organ transplantation; drug screening; HIV; human immunodeficiency vitus; genetic disorder; cardiovascular; renal; rheumatoid arthritis; systemic lupus erythematosus; amyloidosis;

The invention relates to human BAFF receptor (BAFF-R) nucleic acids and proteins. BAFF-R is a B-cell activating factor belonging to the Tumour Necrosis Factor (TMF) family, which is associated with the expression of Lecals and immunoglobulins. The BAFF-R proteins, DNA and antibodies are useful for treating, preventing or delaying autoimmune diseases, cancer, tumourigenic conditions or inherited genetic disorders involving B-cells, hypertension, cardiovascular disorders, immunosuppressive diseases, renal disorders, inflammation, organ transplantation and HIV. Autoimmune clussess, which can be treated or prevented by BAFF-R, include systemic lupus erythematosus, rheumatoid arthritis, myasthenia gravis, autoimmune classes, anti-phospholipid syndrome, Wegener's gravis, autoimmune cluses, anti-phospholipid syndrome, Wegener's granulomatosis, poly-arteritis nodosa and rapidly progressive glomerulonephritis. Plasma calls disorders e.g., multiple myeloma, Waldentrom's macrosis, heavy-chain disease, primary or immunocyte associated amyloidosis, and monoclonal gammopathy of undetermined significance. The nucleic acids, protein, protein homologues, and antibodies may further be used in protein disease, and antibodies and further be used in creening assays, in detection assays (chromosomal mapping, tissue typing or greening assays, nonlinical trials, or pharmacogenomic). The polypeptides are further useful as immunogens to raise anti-BFFR antibodies, or in the constructing drugs or compounds that modulate BAFF-R activity or expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 QEGSALRPDVALLVGAPALLGLILALTLVGLVSLVSWRWRQQLRTASPDTSEGVQQESLE 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; BAFF receptor; BAFF-R; cytostatic; hypotensive; inflammation; TNF;
                                               ; TRAR3-binding B cell-specific receptor; TRAR3; transduction; TNT ligand; cancer; autoimmune disease; apoplexia; infection; AIDS; bone disease; transplantation rejection; imer's disease; ischaemia; rheumatoid arthritis; cachexia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a murine TRAF3-binding B cell-specific receptor. The polynucleotide and polypeptide sequence of this receptor are useful for diagnosis of abnormality due to TRAF3-mediated intracellular signal transduction and in screening drugs for diseases associated with TNF ligand family and TNF receptor-ligand superfamily e.g. cancer, autoimmune diseases, viral infections like AIDS, bone diseases, transplantation rejection, Alzheimer's disease, ischaemia, rheumatoid arthritis, apoplexia and cachexia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 MGARRIRFRSQRSRDSSVPTQCNQTECFDPLVRNCVSCELFHTPDTGHTSSLEPGTALQP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a murine BR3 polypeptide. The specification also describes TACI polypeptides. TACI and BR3 are receptors. Tumour necrosis factor (TNF) family ligands TALL-1 and April bind to the TACI receptor, while TNF family ligands TALL-1 also binds to BR3 receptor. The TACI and BR3 receptor nucleic acid is useful for preparing a composition for treating systemic lupus erythematosus.
                                                                                                                                                                                                                         Human; TACI; BR3; receptor; tumour necrosis factor ligand; TNF ligand;
TALL-1; April; systemic lupus erythematosus.

The invention relates to human BAFF receptor (BAFF-R) nucleic acids and proteins. BAFF-R is a B-call activating factor belonging to the Tumour Recrosis Factor (TMF) family, which is associated with the expression of B-calls and immunoglobulins. The BAFF-R proteins, DNA and antibodies are useful for treating, preventing or delaying autoimmune diseases, cancer, tumourigenic conditions or inherited genetic disorders involving B-calls, hypertension, cardiovascular disorders, immunosuppressive diseases, renal diseases.

"In this numeration, organ transplantation and HUY Autoimmune diseases, which can be treated or prevented by BAFF-R, include systemic lupus erythematosus, rheumatoid arthritis, myasthenia gravis, autoimmune cluseases, anti-phospholipid syndrome, Wegener's granulomatosis, poly-arteritis nodosa and rapidly progressive glomerulonephritis. Plasma calls disorders e.g., multiple myeloma, Waldenstrom's macrosis, and monoclonal gammopathy of undetermined significance. The nucleic acids, protein, protein homologues, and antibodies may further be used in protein promotoring clinical trials, or pharmacogenomic, The polypeptides are further useful as immunogens that modulate BAFFR antibodies, or in the content of the properties of the properties are further useful as immunogens that modulate anti-BFFR antibodies, or in the content of the properties are further useful as immunogens that modulate BAFFR antibodies, or in the content of the properties Tumour Necrosis Factor; autoimmune disease, immunosuppressive, cancer; myasthenia gravis, hypertension; organ transplantation; drug screening; HIV; human immunodeficiency virus, genetic disorder; cardiovascular; renal; rheumatoid arthritis; systemic lupus erythematosus; amyloidosis; haemolytic anaemia; Chagas' disease; Grave's disease; glomerulonephitis; multiple myeloma; chromosomal mapping; tissue typing; drug screening; The present sequence is human BAFF-R protein mutant.

Note: The present sequence is not shown in the specification but is derived from human BAFF-R referred as SEQ ID NO: 5 (AAE22242) and shown New human BAFF receptor proteins and nucleic acids, useful for treating, preventing or delaying e.g. autoimmune diseases, cancers, inherited genetic disorders involving B-cells, cardiovascular "ulb note= "Wild type Val substituted with Asn" note= "Wild type Pro substituted with 'note= "Wild type Ala substituted with /note= "Wild type Leu substituted with Location/Qualifiers Example 17; Page -; 164pp; English. the specification. or renal disorders 18-SEP-2000; 2000US-233152P. 21-SEP-2000; 2000US-234140P. 13-FEB-2001; 200IUS-268499P. 14-AUG-2001; 200IUS-312185P. 36-SEP-2001; 2001WO-US28006 Thompson JS; WPI; 2002-362428/39. The invention relates to human BAFF receptor (BAFF-R) nucleic acids and proteins. BAFF-R is a B-call activating factor belonging to the Tumour vecrosis Factor (TMF) family, which is associated with the expression of B-calls and immunoglobulins. The BAFF-R proteins, DNA and antibodies are useful for treating, preventing or delaying autoimmune diseases, cancer, tumourigenic conditions or inherited genetic disorders involving B-cells, hypertension, cardiovascular disorders, immunosuppressive diseases, renal diseases, inflammation, organ transplantation and HIV. Autoimmune diseases, the amendation, organ transplantation and HIV. Autoimmune beamed, idiopathic thrombocycopaenia purpura, Chagas' disease drawe's disease, anti-phospholipid syndrome, Wegener's granulomatosis, poly-arteritis nodosa and rapidly progressive glomerulonephritis. Plasma classical disease, anti-phospholipid syndrome, Wegener's granulomatosis, poly-arteritis nodosa and rapidly progressive glomerulonephritis. Plasma classical disease, multiple myeloma, Waldenstrom's macroglobulinaemia, heavy-chain disease, primary or immunocyte-associated amyloidosis, and monoclonal gammopathy of undetermined significance. The nucleic acids, protein, protein homologues, and antibodies may further be used in screening assays, monitoring clinical trials, or pharmacogenomic). The polypeptides are further useful as immunogens to raise anti-BFFR antibodies, or in screening drugs or compounds that modulate BAFP-R activity or expression. The present sequence is human BAFF-R protein mutant.

The present sequence is not shown in the specification but is derived from human BAFF-R protein mutant.

The present sequence is not shown in the specification but is not shown in the specification but shown in the specification.

The invention relates to human BAFF receptor (BAFF-R) nucleic acids and proteins. BAFF-R is a B-cell activating factor belonging to the Tumour Nectains BAFF-R is a B-cell activating factor belonging to the Tumour necessis and immunoglobulish. The BAFF-R proteins, DNA and antibodies are useful for treating, preventing or delaying autoimmune diseases, cancer, tumourigenic conditions or inherited genetic disorders involving B-cells, hypertension, cardiovascular disorders, immunosuppressive diseases, ranal disorders, inflammation, organ transplantation and HIV. Autoimmune and sorther an activation and the Argented or prevented by BAFF-R, include systemic lawolytic anaemia, idiopathic thrombocytopaenia purpura, Chagas' disease care in thospholipid syndrome, Wegner's granulomatosis, poly-arteritis nodosa and rapidly progressive glomerulonephritis. Plasma clls disorders e.g., multiple myeloma, Waldenstrom's macroglobulinaemia, heavy-chain disease, primary or immunocyte-associated amyloidosis and monoclonal gammopathy of undetermined significance. The nucleic acids, protein, protein homologues, and antibodies may further be used in screening assays, in detection assays (chromosomal mapping, tissue typing or forensic biology), predictive medicine (e.g. diagnostic or prognostic assays, monitoring clinical trials, or pharmacogeneous). The polypeptides are further useful as immunogens to raise anti-BFFR activity or expression. The present sequence is human BAFF-R protein mutant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        115 QQESLENVFVPSSETPHASAPTWPPLKEDADSALPRHSVPVPATELGSTELVTTKTAGPE 174

The invention relates to human BAFF receptor (BAFF-R) nucleic acids and proteins. BAFF-R is a B-cell activating factor belonging to the Tumour Necrosis Factor (TNF) family, which is associated with the expression of B-cells and immunoglobulis. The BAFF-R proteins, DNA and antibodies are useful for treating, preventing or delaying autoimmune diseases, cancer, tumourigenic conditions or inherited genetic disorders involving B-cells, hypertension, cardiovascular disorders, immunosuppressive diseases, renal diseases, which can be treated or prevented by BAFF-R, include systemic lupus erythematosus, rheumatoid arthritis, myasthenia gravis, autoimmune classes, which can be treated or prevented by BAFF-R, include systemic lupus erythematosus, rheumatoid arthritis, myasthenia gravis, autoimmune cave's disease, anti-phospholipid syndrome, Wegener's granulomatosis, poly-arteritis nodosa and rapidly progressive glomerulonephritis. Plasma calls disorders e.g., multiple myeloma, Waldenstrom's macrosic, calls disorders e.g., multiple myeloma, waldenstrom's macrosic, heavy-chain disease, primary or immunocyte-associated amyloidosis, and monoclonal gammopathy of undetermined significance. The nucleic acids,

```
protein, protein homologues, and antibodies may further be used in screening assays, in detection assays (chromosomal mapping, tissue typing or forensic biology), predictive medicine (e.g. diagnostic or prognostic assays, monitoring clinical trials, or pharmacogenomic). The prognostic are further useful as immunogens to raise anti-BFFR antibodies, or in screening drugs or compounds that modulate BAFF-R activity or expression. The present sequence is human BAFF-R protein mutant.

Note: The present sequence is not shown in the specification but is derived from human BAFF-R referred as SEQ ID NO: 5 (AAE22242) and shown in fig 2d of the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; BAFF receptor; BAFF-R; cytostatic; hypotensive; inflammation; TNF; Tumour Mecrosis Factor; autoimmune disease; lummiosuppressive; cancer; myasthenia gravis; hypertension; organ transplantation; drug screening; HIV; human immunodeficiency virus; genetic disorder; cardiovascular; HIV; human immunodeficiency virus; genetic disorder; cardiovascular; haral; rheumatoid arthritis; systemmic lupus arythematosus; amyloidosis; haemolytic anaemia; Chagas' disease; Grave's disease; glomerulonephritis; multiple myeloma; chromosomal mapping; tissue typing; drug screening;

The invention relates to human BAFF receptor (BAFF-R) nucleic acids and proteins. BAFF-R is a B-cell activating factor belonging to the Tumour Necrosis Factor (TMP) family, which is associated with the expression of B-cells and immunoglobulins. The BAFF-R proteins, DNA and antibodies are useful for treating, preventing or delaying autoimmune diseases, cancer, tumourigenic conditions or inherited genetic disorders involving B-cells, hypertension, cardiovascular disorders, immunosuppressive diseases, renal disorders, inflammation, organ transplantation and HIV. Autoimmune disorders, inflammation, organ transplantation and HIV. Autoimmune beemolytic anaemia, idiopathic thrombocytopaemia purpura, Chagas' disease, anti-phospholipid syndrome, Wegener's granulomacosis, poly-arteritis nodosa and rapidly progressive glomerulomephritis. Plasma cells disorders e.g., multiple myeloma, Waldenstrom's, macroglobulinaemia, have, chain adisease, primary or immunocyte-associated amyloidosis, and monoclonal gammopathy of undetermined significance. The nucleic acids, protein, protein homologues, and antibodies may further be used in screening assays, in detection assays (chromosomal mapping, tissue typing or forensic biology), predictive medicine (e.g. diagnostic or propnostic assays, monitoring clinical trials, or pharmacogenomic). The polypeptides are thirher useful as immunogens to rasise anti-bries antibodies, or in screening cruckers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            114
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 eening drugs or compounds that modulate BAFF-R activity or expression. present sequence is human BAFF-R protein mutant.

i. The present sequence is not shown in the specification but is ived from human BAFF-R referred as SEQ ID NO: 5 (AAE22242) and shown
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                62
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RSLRGRDAPPAPTPCNPAECFDLLVRHCVACGLLRTPRPRPAGAASSPAPRTALQPQESVG 65

cancers,

Dioteins. BAFF-R is a B-cell activating factor belonging to the Tumour Necrosis Factor (TMF) family, which is associated with the expression of useful for treating, preventing or delaying autoimmune disease, cancer, tumourigenic conditions or inherited genetic disorders involving B-cells, hypertension, cardiovascular disorders, immunosuppressive diseases, renal disorders, inflammation, organ transplantation and HIV. Autoimmune diseases, inflammation, organ transplantation and HIV. Autoimmune becames, inflammation, organ transplantation and HIV. Autoimmune disorders, inflammation, organ transplantation and HIV. Autoimmune disorders, inflammation, be treated or prevented by BAFF-R, include systemic lupus erythematosus, rheumatoid arthritis, myasthemia gravis, autoimmune haemolytic anaemia, idiopathic thrombocytopaenia purpura, Chagas' disease care in the phospholipid syndrome, Wegener's granninamente care properties, primary or immunocyte-associated maylodissis, poly-arteritis nodosa and rapidly progressive glomerulonephritis: Plasma cells disorders e.g., multiple myeloma, Waldenstrom's, macroglobulinaemia, monoclomal gammopathy of undetermined significance. The nucleic acids, primary or immunocyte-associated maylodissis, and monoclomal gammopathy of undetermined significance. The nucleic acids, protein, protein homologues, and antibodies may further be used in series, further useful as immunogens to raise anti-BFPR antibodies, or in screening drugs or compounds that modilate BAFP-R activity or expression. The present sequence is not shown in the specification but is darived from human BAFP-R protein mutant.

The present sequence is not shown in the specification but is darived from human BAFP-R protein mutant.

The present sequence is not shown in the specification but is in fig 2d of the specification. invention relates to human BAFF receptor (BAFF-R) nucleic acids and 185 AA; Sequence

CC Necrosis Factor (TNF) family, which is associated with the expression of concert and immunoglobulins. The BAFF-R proteins, DNA and antibodies are useful for treating, preventing or delaying autoimmune diseases, cancer, tumourigenic conditions or inherited genetic disorders involving B-cells, typertension, cardiovascular disorders, immunosuppressive diseases, renal diseases, which can be treated or prevented by BAFF-R, include systemic diseases, which can be treated or prevented by BAFF-R, include systemic conditions and the interest of prevented by BAFF-R, include systemic conservation, organ transplantation and HIV. Autoimmune diseases, which can material arthritis, myasthenia gravis, autoimmune conservated and idiopathic thrombocytopeania purpura, chagas' disease crave's disease, anti-phospholipid syndrome, Wegener's granulomatosis, conservated disease, primary or immunocytopathic syndromes, macrolometrosis, and chartering assay, in detection will apply syndromes, and should apply conservated amyloidosis, and conservated and antibodies and syndromes, assays, monitoring clinical trials, or pharmacogeneous or incensic biology), predictive medicine (e.g. diagnostic or prognostic assays, monitoring clinical trials, or pharmacogeneous). The present sequence is human mature JSTS76 (BAFF-R) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; BAFF receptor; BAFP-R; cytostatic; hypotensive; inflammation; TNF; Thumour Borosis Factor; autoimmune disease, immunosuppressive; cancer; myasthenia gravis; hypertension; organ transplantation; drug screening; HIV; human immunodeficiency virus; genetic disorder; cardiovascular; renal; rheumatoid arthritis; systemic lupus erythematosus; amyloidosis; haemolytic anaemia; Chagas' disease; Grave's disease; glomerulonephritis; multiple myeloma; chromosomal mapping; tissue typing; drug screening; USTS76.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                     The invention relates to human BAFF receptor (BAFF-R) nucleic acids and proteins. BAFF-R is a B-cell activating factor belonging to the Tumour Necrosis Factor (TMF) family, which is associated with the expression of B-cells and immunoglobulins. The BAFF-R proteins, DNA and antibodies are tumourigenic conditions or inherited genetic disorders involving B-cells, typertension, cardiovascular disorders, immunosuppressive diseases, renal disorders, inflammation, organ transplantation and HIV. Autoimmune diseases, renal disorders, inflammation, organ transplantation and HIV. Autoimmune be treated or prevenced by BAFF-R, include systemic lupus erythematosus, rheumatoid arthritis, wyasthenia gravis, autoimmune haemolytic anaemia, idiopathic thrombocytopaemia purpura, Chagas' disease crave disease, anti-phospholipid syncome, Wegener's granulomatosis, poly-arteritis nodosa and rapidly progressive glomerulonephritis. Plasma cells disorders e.g. multiple myeloma, Waldenstrom's macroglobulinaemia, neonoclomal gammopathy of undetermined significance. The nucleic acids, protein, protein homologues, and antibodies may further be used in screening assays, in detection assays (chromosomal mapping, tissue typing or forensic biology), predictive medicine (e.g. diagnostic or protein, creating drugs or compounds that medulate BAFF-R activity or expression.

The present sequence is human mature JSTS76. (BAFF-R) cDNA spliced version
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                139
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            107

The present sequence represents a human tumour necrosis factor receptor designated Znfr12 [1]. [1] has cytostatic, immunosuppressive, designated Znfr12 [1]. [1] has cytostatic, immunosuppressive, designated Znfr12 antiathabetic, and can be used in gene therapy. [1] can be used for activity of a ligand that binds Znfr12 [1] in a mammal, the activity of a ligand that binds Znfr12 [1] in a mammal, the activity of a ligand that binds Znfr12 [1] in the proliferation of tumour cells. [1] is useful for treating autoimmune disorders such as systemic lupus erythematosus, myashenia gravis, multiple sclerosis, insulin dependent diabetes mellitus, asthma, replaces such as glomerulonephritis, and for treating renal leukaemis, nephritis, bronchitis, emphysema and charactic arthritis, and pyelonophritis, and for treating renal neoplasms; multiple myelomes, light chain neuropathy, or amyloidosis, hypertension, large vessel diseases, graff rejection and crohn's disease, graff rejection and crohn's disease, graff rejection and crohn's disease. [1] is useful for modulating the immune system, for requlating B cell responses and development, for modulating development of other cells, antibody production, and for modulating T and B cell communication. Human Ztnfr12 is located to chromosome 22q13.2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          62
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        termed

The invention is used to manufacture a medicament for inhibiting the proliferation of tumour cells in a mammalian subject. Iterating autoimmune diseases (e.g. systemic lupus erythematosus, multiple sclerosis, diabetes mellitus, rheumatoid arthritis and asthma), renal diseases (e.g. glomerulomphritis), bronchitis, inflammation, graft rejection, anaemia and septic shock. The fusion proteins are also used in gene therapy. The present sequence is human Ztnfr12

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a human BR3 polypeptide. The specification also describes TACI polypeptides. TACI and BR3 are receptors. Tumour necrosis factor (TNF) family ligands TALL-1 and April bind to the TACI receptor, while TNF family ligands TALL-1 also binds to BR3 receptor. The TACI and BR3 receptor nucleic acid is useful for preparing a composition for treating systemic lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; TACI; BR3; receptor; tumour necrosis factor ligand; TNF ligand;
TALL-1; April; systemic lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 rsirgrdapaptpcvpaecrolivkhcvacgilriprpkpagasspaprtalOPOESVGA

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 4, Ay Sequence 1, Ay Sequence 12,
